DETAILED ACTION

Allowable Subject Matter

1. Claims 5-6, 12, 14-16, 18-20, 58, 61-63 are 86-92 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach or fairly suggest: A substrate support comprising: a) a ceramic support having an electrode embedded therein, the electrode being chargeable to electrostatically hold a substrate; and b) a contact surface comprising a plurality of mesas, each mesa composed of (i) *a surface coating comprising a diamond-like carbon material having a composition of from about 50 atom % to about 90 atom % carbon, from about 5 atom % to about 10 atom % hydrogen, from about 10 atom % to about 20 atom % silicon, and from about 5 atom % to about 10 atom % oxygen, the surface coating comprising a coefficient of friction of less than about 0.3, an average surface roughness of less than about 0.4 micrometers, and a microhardness of at least about 8 GPa (emphasis added)*; and (ii) an adhesion layer comprising a metal layer between the ceramic support structure and the surface coating. Further, no other prior art was located that fairly suggested the claimed invention in whole or in part, along with the requisite motivation for combination, to anticipate or render the claimed invention obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 1716

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

2. Applicant's arguments with respect to the provision and claiming of a titanium adhesion layer have been considered but are moot in view of the newly amended subject matter drawn to the composition of the diamond-like carbon surface coating, which distinguishes the claimed invention over the prior art. These arguments are further considered moot as previously cited art to Bache (USP 5,032,243) discloses use of titanium adhesion interlayer for a diamond-like carbon coating.
